Others Information**Additional details of Fund's investment policy****1. Sustainability Investment Objectives**

The Fund will invest in stocks of companies listed on the Stock Exchange of Thailand and/or the Market for Alternative Investment that are outstanding in the management of Environment or Sustainability (Environment, Social and Governance: ESG) and/or help reduce the climate change impacts by having management plans and setting goals to reduce the amount of greenhouse gas emissions in Thailand. Also, the Fund will invest in instruments for green bond, sustainability bond, or sustainability - linked bond that have information disclosed as required by the SEC Office, or the Fund may invest in bonds or debentures for green bonds, sustainability bond, or sustainability - linked bonds which has passed the investment analysis process using ESG Integration on average in a fiscal year at least 80% of the NAV.

2. Sustainable Development Goals

The Fund recognizes its role as an institutional investor in supporting companies that are outstanding in the management of Environment or Sustainability (Environment, Social and Governance: ESG) with the goal of driving the sustainable development of the Thai capital market and promoting ESG Transition in Thailand or achieving the goal of reducing global temperatures and the climate change impacts, which is the 13th goal of Sustainable Development Goals (SDGs) of the United Nations.

3. Investment Universe

The fund has a policy to diversify its investments in the following assets on average in a fiscal year at least 80% of the NAV:

- (1) Stocks that are securities listed on main board of the SET or on the MAI board that are selected by the SET or other organizations or institutions that the SEC Office recognizes as having outstanding in Environment or Sustainability (Environment, Social and Governance: ESG) and/or
- (2) Stocks that are securities listed on main board of the SET or on the MAI board that disclose information about greenhouse gas emissions, management plans, and goal setting to reduce the amount of greenhouse gas emissions in Thailand which also include having verification of carbon footprint by auditors accepted by the SEC Office and

Definition

Maximum Drawdown refers to the highest percentage loss of the fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is calculated from the highest unit value to the lowest unit value during the period that the unit value is declining. The Maximum Drawdown is an indicator of the risk of loss from investing in the fund.

Recovering Period is used to give investors an idea of how long it will take from the time of maximum loss of the fund to the recovery of initial investment.

FX Hedging refers to the percentage of investments denominated in foreign currency that are hedged against exchange rate risk.

Portfolio Turnover Ratio (PTR) indicates the trading frequency of securities in the investment portfolio of the fund over a given period. It is calculated by taking the lower value between the total amount of new securities purchased and the total amount of securities sold over the past 1 year, divided by the average NAV of the same period. The fund with high PTR reflects frequent trading by the fund manager which leads to high trading costs. Investors should compare this data with the fund performance in order to evaluate the worthiness of such trading strategy.

Sharpe Ratio is the ratio between the excess return of the fund and the investment risk. It is calculated from the difference between the investment return of the fund and the risk-free rate of return divided of returns for the investment. The Sharpe Ratio reflects how much returns the fund will receive to offset the investment risk of the fund. The fund with a higher Sharpe Ratio means that it is managed more efficiently because it generates higher excess returns given the same level of investment risk.

Alpha is the excess return of the fund relative to the return of its corresponding benchmark. A high alpha indicates that the fund generates higher return than its benchmark which is resulted from the efficiency of the fund manager in securities selection or determining the right timing for investment.

Beta is a measure of the returns of securities in the portfolio in relation to the market as a whole. A beta of less than 1 indicates that the returns of the fund's portfolio are less volatile than the overall market. On the other hand, a beta of greater than 1 indicates that the returns on the portfolio are more volatile than the market return.

Tracking Error The rate of return of the fund has the efficiency to replicate the corresponding benchmark. If the tracking error is low, it implies that the fund is able to generate similar returns to its benchmark efficiently. The fund with high tracking error will have an average rate of return that is more deviated from the benchmark.

Yield to Maturity (YTM) is the rate of return for investing in a debt instrument assuming that the investor holds the asset until its maturity date. It is calculated from the coupon payments to be earned by the investor over the remaining term of the instrument plus the face value due at maturity which are discounted to a present value. YTM is used to measure the rate of return of a fixed income fund which is based on the weighted average YTM of each debt instrument in the portfolio of the fund. As YTM is expressed as an annual percentage rate, it can be used for performance comparison among the fixed income funds with a 'buy and hold' investment strategy and similar investment characteristics.
